The Bosch Belt Sander High Power for a High Material Removal Rate The Bosch belt sander is the ideal power tool for all coarse sanding work that demands a high material removal rate on larger surfaces. It offers the maximum sanding performance on wood, plastic or metal. It is designed for work on larger surfaces such as paintwork, fillers, plastics, wood, metal and stone. The Bosch PBS 7 A offers a much better performance than its predecessor PBS 60. The tool has automatic belt centring and provides a higher removal rate on varnish. It's also easier to use, with lower noise and vibration for higher user comfort. It has a powerful 600 watt motor, weighs just 2.4kg and has a belt speed of 250 meters per minute. The PBS 7 A can be used in a variety of modes with the use of accessories and clamps, and it can be used in both vertical and horizontal positions. In addition, you can attach a parallel or angle guide on the length or on the line for higher exactness while sanding. Bosch Electronics Speed Selection The Bosch Electronic Speed Control enables the belt speed to be matched to the materials being sanded. The speed preselection allows you to set up speed range suitable for the material, meaning that it is very easy to operate for equalising, smoothing and cleaning of wood, plastic and metal surfaces. Sanding Belt Tensioning System The sanding belt can be changed comfortably and fast with the easy to operate tensioning lever. Belt Centring Fine Adjustment The fine adjustment guarantees optimum automatic belt centring operation. Microfilter System The integrated microfilter system conveys the dust at high speed directly through the sanding sheet and sanding pad, trapping it in the microfilter box.

The box can be emptied quickly and easily by removing the lid, so it can be used repeatedly. The result clean workplace, clean air clean results even without a vacuum cleaner. Integrated dust extraction is essential and environmentally friendly. Users can connect a vacuum cleaner, but it has

to be suitable for the material to be worked. When vacuuming dry dust that is especially detrimental to health or carcinogenic, use a special vacuum cleaner. Ian Roberts 3.0 out of 5 stars There is another opening on the side of the machine which needs regular clearance of dust so there are two areas that can clog. The collector is not that easy to keep clean. I have not used another brand to compare it with so it may be as good as it gets. This all being said it is a Bosch and does the job and hopefully will for the next decade. The filter is difficult to remove, and stiff to open, you have to open it somewhere you don't worry about mess as it usually spills everywhere, but the problem is the size of it, it runs for about 2 or 3 minutes before it needs emptying, otherwise it blocks up the sander, I really should have gone to the local diy store to inspect before buying. Having said that, the machine works well, typical Bosch product, appears to be good quality, and is probably good for occasional sanding, maybe refurbishing a cabinet or doors, but not larger areas, the dust collection system was probably designed by the engineers secretary.

It took an eternity last time with an orbital sander, so I thought I'd give this belt sander a try. What a great tool, it absolutely tore through the job in no time. Brilliant, and good value for money too. Silverline lets work well with it. It produces a very high pitched scream which is not a fault with mine as I've read other reviewers who have said the same. Had to buy ear defenders as I'm sure this will damage your hearing over time. Don't think the neighbours appreciate me using this sander for too long either! The built-in dust collection unit does a good job, though a dust mask and ventilation are still essential for your own safety. Comfortable to hold, light enough to work for longer periods yet heavy enough to sit upside down on the bench without a need to be clamped down. Belts are easy to change for different stages of finishing and the working area of the belt is large enough to give a good flat finish across larger work pieces. The first arrived smashed up and the second one broke on the first day. It was very good while it was working. The dust extraction is a waste of time. I'm not sure if I will order another one. I think I woke up all neighbors around. It is very loud, could that be that mine is faulty. I don't know as it does the job I wanted. Much noise. Otherwise it performs very well. A triggerflip switch ensures that the tool is safely locked out of operation when not in use. Smooth and easy work Bosch Low Vibration is a shockabsorbing and vibrationdampening feature designed to reduce user fatigue for comfortable, smooth, and easy work in extensive or difficult applications. Reduce dust for a cleaner working area During sanding, dust is automatically drawn into the removable Microfilter System box for a noticeably cleaner working area. The tool can also be attached to a vacuum cleaner. For selfcentring of the sanding belt The automatic belt system centres the sanding belt during operation, saving adjustment time and ensuring the abrasive is optimally positioned. The belt sander stands out from the competition thanks to its optimised ergonomics and compact design. User Manual; Health Safety Sheet 1. Introducing the Bosch PBS 75A with a coarse grit 40 sandpaper and WOW this very. For Bosch PBS 7A, PBS 7AE. 1 x sender drive belt. Perfect handling across all sanding applications. The sturdy housing is built to a high standard and is exceptionally stable. One of the reasons for this is that the belt sander incorporates integrated aluminium components. The belt sander is particularly well suited to sanding applications where you need a high removal rate on large surfaces. These could include DIY restoration work like sanding down wooden stairs or roof beams. The machine is equipped with an automatic belt centring system. This feature positions the sanding belt in the centre of the sanding plate once the sander has been started. This saves time and ensures the abrasive is optimally seated. If the user wishes to work close to the edges, they can use the adjuster screw to finely adjust the sanding belt. The sanding belt can be replaced easily as usual using a tension lever. The dust box with the Bosch Microfilter System provides a dustfree working environment. This noticeably reduces the amount of dust produced and ensures cleaner working conditions. The box is transparent so that it is convenient for you to keep an eye on its current fill level. The user can also connect a vacuum cleaner to the belt sander. Thanks to the low volume of dust it produces, the belt sander can also be used in this way in interiors with electronic devices and furniture that is susceptible to dust. Saturday evening and my belt sander broke down when I had lots of sanding work planned for Sunday. It showed all the symptoms of a broken drive belt and luckily I keep a spare.

However, on opening the belt cover, the belt was intact but the drive gear bearing was loose in the machine's plastic casing, allowing the belt to lose tension and jump the drive teeth. Normally a chewed plastic casing means the tool is scrap but with nowhere open to get a replacement I thought I'd try a repair. I found a spare length of 22 mm copper pipe and sliced off a 4 mm section. Cut the section in half to make a U and peened each end into a taper. This can be seen in the photo as the orange section beneath the hexagon. With a bit of determined persuasion managed to refit the bearing in the casing and then reassembled the tool. Happily the belt tension was then restored to normal. Was able to work all yesterday without a hitch and then took the belt cover off to check and take this photo. So glad now that I was forced into trying a repair for this sander because even the Lidl equivalents are not cheap. Thought Chancer might like this story. Now on my last one, and can't buy them anywhere. Seems to be an issue with sanders in France, brought over 2 palm sanders, they packed up shortly afterwards, friend gave me his, that packed up, bought one from uk on a quick trip last year, that packed up, bought a Bosch on a couple of months ago, and that's playing up, sanding sheets have stopped sticking to the base so had to stick Velcro to it to get the pads to stick,

but even now, that one has decided it will only work when it feels like it. Wrote It may depend on what you're sanding. Body filler seems to produce a really fine dust and that's the grey powder in the photo. Was it that or was it just hard usage that did for my bearing housing. Tom If the bearing housing was melted, it suggests the bearing had been spinning in its housing and producing heat, which could be due to either too much pressure on the sander overloading and heating the bearing, or dirt getting into the bearing and locking it up.

In either case the bearing may be damaged and it would be worth replacing it, or at least examining it closely and relubricating it. It should be easy enough to get a replacement bearing from the numbers stamped on the old one, but make sure the replacement has a loose radial clearance, usually marked "C3" or less commonly "LRC", which allows for higher temperature operation. For bearings sold loose, special markings are etched on those selected from the normal production, and not stamped on the shell, so may have worn off the old bearing. OEM bearings, supplied to manufacturer's spec., do not usually have any markings other than the standard size. Sonic Advance 3 Gba Rom. I did look at the bearing and found that it turned freely and still had a good dollop of original grease around it. I think that I was just too heavyhanded with the poor machine, probably pressing down excessively to get the very last out of a worn sanding band. I've been changing the bands regularly now and the sander has done lots of work recently without complaint. Here's a photo of the shutters it has had to tackle. The louvres can be tricky because they're oak and very hard. Firstly a blowtorch and scraper for the old paint on the blades with a flat rasp file for the uprights between. Then a fine flat file to smooth the blades themselves. To finish I use one of the sanding bands and lay it lengthwise between the blades and wear gardening gloves for grip. Have to be very wary of cuts or splinters from the the sharp edges of the louvres but the continuous band completely covers the louvre below and above and affords a degree of safety. In truth, the result is not brilliant but I'm happy if the paint raises no nibs. I also use matt finish paint, which hides a multitude of sins. I have a Fartools electric plane which I have had for over 12 years. Recently the drive belt gave out on it and I ordered another one from a French company. It arrived this afternoon.

I fitted the belt taking care to look for any direction of rotation that may be marked on the belt. Tema Untuk Notebook Windows 7 Ultimate 32 Bit Activator. There was none so I fitted the belt and continued with the job that I wanted the plane for. After about two minutes of operation there was a noise from the plane which I thought did not bode well.
